

Classroom expectations:

- Be on time and prepared for class
- Show respect for yourself, others, learning and your environment
- Bring a positive attitude and be prepared to learn
- Do work you are proud of
- Keep the lab clean

Items needed for class:

- Pen and/or pencil
- Notebook for notes and assignments
- Folder or binder (there will be semester finals)
- Notecards

Late and/or incomplete assignments:

- 1 day late - 25% grade reduction
- 2 days late - 50% grade reduction

Discipline:

This should not be a problem. You have elected to take this class and are here to learn along with your classmates. If for some reason you should be removed from class, you will be given an additional assignment. Anyone caught cheating will be given a 0 on that assignment, quiz or test and will not be allowed to make it up.

Cell Phones:

You will be allowed to hold on to your cell phone but you may not be on it during class. If the device is used during class, it will be handed over to the teacher. You may use your device as a calculator if needed but they will not be allowed to be used on tests. On test days, electronic devices will be collected at the front of the room.

Absences:

Good attendance is extremely important! Students will not be punished for excused absences but are responsible for obtaining any missing notes and making up assignments and quizzes/tests. Students will have two days to make up work for every day gone, however anything handed out when the student was present is due as soon as they return. (For example, if you were handed a study guide the last day you were in class and missed the test day, you will be expected to take the test the day you return) Unexcused absences will be dealt with according to the student handbook.

The study of human anatomy will involve a lot of memorization. We will have frequent quizzes and tests. There will be lab activities, dissections, presentations and research projects.

Topics Covered:

Semester 1

- Introduction to Anatomy
- Cells and tissues
- Integumentary System
- Skeletal System
- Muscular System
- Blood & Cardiovascular system
- Circulatory system

Semester 2

- Nervous system
- Special Senses
- Digestive System
- Respiratory System
- Urinary system
- Endocrine system
- Reproductive System
